

Drilling rig operators for airport construction in Greenland

Are you a skilled machine operator, and would you like to operate our drilling rigs on our airport project in Greenland?

From 2020 until 2024, Munck Civil Engineering are constructing two international airports in Greenland, Nuuk and Ilulissat, respectively. For this project, we are looking to recruit a number of skilled machine operators to operate our drilling rigs. – Drill specific training is provided on site.

The airport contract includes construction of runways, taxiways, site preparation for new terminal buildings, production and paving with asphalt, rerouting and connection to access roads, installing electrical, water and sewer lines as well as construction of parking area. The main part of the work consists of drilling and blasting rock and building the crushed material into the coming runway.

Therefore, we are currently looking for experienced machine operators with the skills to operate our EPIROC drilling rigs - specifically the models FlexiROC T30R and SmartROC T40-11.

We offer training and courses in drilling rig operating, if necessary.

We offer:

- A unique opportunity to live and work in Greenland
- Accommodation in our camp where all meals are available free of charge
- Professional and personal development – i.a. courses and training in operating the EpiRoc Machine
- Attractive salary and health care insurance

The teams will be working in day/night shifts as appropriate.

Are you interested?

For further questions, please contact Senior Project Manager Rasmus Schmidt-Petersen: rsp@munck.dk / GL: +299 292 809 / DK: +45 5167 7719
